

AION LIO IO-Link Adapter - Telemetry Resources

IO-Link Telemetry Resources - Group 0x02

Key	ID	Type	Default	Min	Max	Unit	Description
pdin	0	byte array	empty	0 bytes	32 bytes	raw bytes	Latest raw process data from the connected IO-Link device; interpretation depends on the sensor and its IODD
pdout	1	byte array	empty	0 bytes	32 bytes	raw bytes	Current raw process-output data served by the IO-Link master
vendor_id	2	integer	0	0	65535	raw	IO-Link vendor identity of the connected device
device_id	3	integer	0	0	16777215	raw	IO-Link device identity of the connected device

IO-Link Data Handling

Condition	Behavior
No connected device	Aion clears pdin and pdout and sets vendor_id and device_id to zero.
Data interpretation	Process data is forwarded as raw bytes. A sensor-specific decoder based on the IODD is required to convert it into engineering values.
